Project Summary

The programme, which the German Agency for International Cooperation (GIZ) is implementing since 2003 on behalf of the German Federal Ministry for Economic Cooperation and Development (BMZ), is completely integrated into the Mozambican Government's education strategy and vocational training reforms. The vocational training component is involved in developing and implementing the new labour market-oriented curricula. The programme has made a defining contribution to the development of a reform strategy for vocational training, after which it is now possible to undertake training that meets the demands of the job market. New legislation and practice-oriented curricula have been developed with German support.

Project objectives

Children, young people and especially young women receive good-quality, basic education relevant to the real world and employment-oriented vocational training.

Project Activities

(1) Advice on implementing vocational training reforms in the industrial-technical professions: Electrical Engineering/Electronics, Metal-Mechanics, Information Technology (IT), and Renewable Energies
   • Piloting Competency Based Education and Training (CBET) in 4 Training Centres
   • Application of CBET based training components, qualification of teachers and instructors
   • Installation, application and maintenance of the newly delivered equipment and workshops
   • Technical specification, layout planning and installation of new equipment in close cooperation with teachers and instructors
   • School development and management, cooperation with private sector/industries

(2) Advice on the improvement of training of vocational school teachers
   • Training needs analyses and identification of respective programmes in Mozambique and Germany at TVET management and instructor level
   • Implementation of pilot training measures in Mozambique and Germany
   • Organisation of Human Resource Development and training of vocational teachers/instructors
   • Follow-up and advisory on TVET teachers training on the national level

Service provided

• Advice to TVET management in the area of Electrical Engineering/Electronics, Metal-Mechanics, Renewable Energy and Information Technology (IT)
• Concept and design of training facilities
• Specification and installation of equipment
• Support in the pilot-implementation of the new training at least in 4 Technical Schools/Training Centres
• Development of competency based curricula, teaching materials and instruments for certification for metal, electronics, IT, renewable energy and electrical engineering
• Training of principals, teachers and instructors
• Support in the introduction of Quality Management Systems at the training institutions
• Organization and implementation of public-private partnerships in the TVET sector
