Project Summary

Project Background
In the framework of the following GTZ projects “Consolidating the legal framework for sustainable economic development”, “Energy Efficiency” and the programme “Conservation and sustainable management of natural resources”, a results-based monitoring according to GTZ approach should be introduced.

Project Objectives
- "Consolidating the legal framework for sustainable economic development": Legal and judicial policy forms the framework for the institutional interaction of the market and politics. The processes of creating and enforcing legislation are more effective.
- "Energy Efficiency": Capacities of institutions and companies to improve energy efficiency in grid-supply has improved.
- "Conservation and sustainable management of natural resources": The strategies to conserve and sustainably manage natural resources on national, regional and local level that are exemplary implemented by public and private actors are institutionalized.

Project Activities
GTZ's results model and results-based monitoring was introduced to all three projects. For Energy Efficiency SOPs (Standard Operational Procedures) have been developed. For the Conservation programme, a monitoring was outlined that merges the two monitoring approaches of the respectively involved development organizations RNE (Royal Netherlands Embassy) and GTZ (BMZ). As a result of the workshop a monitoring table is now available with the project.

Implementation Features
The project included the development of respective result chains that need to be taken into view throughout monitoring. Results-based monitoring supports project steering while observing the result chain and the intended target corridors. It further supports knowledge management and contributes to accountancy.

The approach included a combination of training to results-based monitoring, based on theoretical input and practical application; combined with introduction of the monitoring to individual project staff and exemplary discussion of monitoring approaches.

Services Provided
- Review/development of result chains and results-based monitoring, incl. Introduction of project staff
- Training according to GTZ's results-based Monitoring
- Discussion of monitoring EnDev/RNE & GTZ
- Development of SOP (Standard Operational Procedures – Project EE)

Mongolia

Results-based Monitoring for GTZ Projects Mongolia

Client
German Agency for Technical Cooperation (GTZ)

Duration
05/2008 - 07/2008

Personnel
- 1 internat. STE (1,2 PM)
